Data import and aggregation steps:

```
I.   Collate the information specific to flights, airports (like type
of airport, elevation etc) and runway(length_ft, width_ft, surface
etc.). Get all those fields in single dataset which you believe may
impact the delay.

II. Different airline companies may perform differently in terms of on time arrival. The performance may depend on the experience of the airline company. Pull the information specific to different airlines from the Wikipedia page https://en.wikipedia.org/wiki/List_of_airlines_of_the_United_States. Use web scaping to fetch the information about how long the airlines has been in the business.

```

IV. Look into Wikipedia page: https://en.wikipedia.org/wiki/List_of_the_busiest_airports_in_the_United_States Total passenger traffic may also contribute to the delay of flights. The term hub is used to identify busy commercial airports. Large hubs are the airports that each account for at least one percent of total U.S. passenger enplanements. Medium hubs are defined as airports that each account for between 0.25 percent and 1 percent of the total passenger enplanements.

Pull passenger traffic data using web scraping and collate in a table.

```
website_url =
requests.get('https://en.wikipedia.org/wiki/List_of_the_busiest_airports_in_the_United_States').text
soup = BeautifulSoup(website_url,'lxml')
My_table = soup.findAll("table",{"class":"wikitable"})

hub_data = {}
i = 0
for tab in My_table:
    hub_data[i] = pd.read_html(str(tab))
    hub_data[i] = pd.DataFrame(hub_data[i][0])
    i +=1
```

We need only hub data hence first two table

```
hub_data
```

Since % of values missing is 0.2% we can simply eliminate these rows

2. Perform data visualization and share your insights related to following aspects:

I. According to the data provided, around 70% of the flights are delayed for Southwest airlines. Visualize to compare the same for other airlines.
II. No delayed flights on different weekdays. Which days of the week are safest to travel.
III. Which airlines to recommend for short, medium and long length of travel.

Do you observe any pattern in the time of departure of flights of long duration

```
# get id for "southwest Airlines"
id_airline =
airline_dict.loc[airline_dict['Description'].str.strip().str.lower()

1. Perform hypothesis testing techniques to learn:

   I. Has the altitude of the airport anything to do with flight delays. Check for incoming and outgoing flights

   II. Has surface-type of runways of airports anything to do with flight delays

   III. Has length, duration of flight, anything to do with flight delays

I. Has the altitude of the airport anything to do with flight delays. Check for incoming and outgoing flights

2 sample t test

for outgoing

```
sample1 = combined_data_pax[combined_data_pax.Delay ==
1].elevation_ft_source_airport
sample2 = combined_data_pax[combined_data_pax.Delay ==
0].elevation_ft_source_airport

t, p = stats.ttest_ind(sample1, sample2)

if p < 0.05:
    result = 'reject null'
else :
    result = 'fail to reject null'

result
```

```
'reject null'
```

for incoming flights

```
sample1 = combined_data_pax[combined_data_pax.Delay ==
1].elevation_ft_dest_airport
sample2 = combined_data_pax[combined_data_pax.Delay ==
0].elevation_ft_dest_airport

t, p = stats.ttest_ind(sample1, sample2)

if p < 0.05:
    result = 'reject null'
else :
    result = 'fail to reject null'

result
```

```
'reject null'
```

Conclusion : Significant difference in avg elevation wrt flight delay for both incoming and outgoing flights

is no. of runway at airport for delayed < for non delayed

```

print(result)
```

```
reject null
```

Conclusion : avg duration for delayed filghts and non Delayed flights are significantly different.

```
    - avg duration of flights is less for non delayed flights
    - short duration flights get delayed less.
